## BUBBLEWRAP PACKAGING SOLUTIONS

The polyethylene air filled bubbles absorb shock, reduces vibrations and defies abusive handling. They are ideal for shipping or storing fragile or delicate items because of their superb elasticity and resistance to puncture. This product can easily replace polyethylene foam, polyurethane foam or polystyrene foam while providing

higher flexibility, greater ease of handling and a much lower price tag. Its lightweight construction reduces shipping costs when compared to other packaging methods.

We supply value added bubble wrap at 3/4", 1/2" & 3/16" (slit, perf'd, adhesive and cohesive)

**HEAVY DUTY BUBBLE (3/16" & 1/2")**  
The strongest bubble wrap available on the market; 3X stronger than regular bubble wrap.

**PABBLE-PAPER BACKED BUBBLE**  
A laminate of bubble and paper ideal for wrapping furniture when moving. Self adhesive or cohesive rolls are available to reduce excess packaging.

**METALIZED BUBBLE**  
Adds thermal protection while cushioning the items and are also available in pouches as well. It is very effective for insulated projects.

**CLOTH BACKED BUBBLE**  
Ideal for wrapping sensitive items. The perfect solution for easily scratched items. Used in applications such as: furniture and automotive packaging.

**CORRUGATED BUBBLE WRAP**  
This bubble wrap product is backed by corrugated cardboard resulting in a very strong packaging solution and does not require a box or protective cushioning. Very cost effective, simple to use and durable.

**HEAVY DUTY BUBBLE POUCH**  
Made of our best Heavy Duty 1/2" bubble wrap, this is customizable to ensure the ultimate protection of package contents! It is perfect for protecting smaller sensitive materials such as electronics, furniture during storage and shipping, fragile products such as industrial machinery.

**PILLOWPAK**  
The Pillowpak is a composition of 2 or more layers of bubble wrap encased in a plastic bag. Pillowpaks are perfect for items of irregular shapes and different sizes. The result is a super protective packaging solution that is simple to use.

## CARDBOARD PACKAGING SOLUTIONS

Packaging for furniture needs to offer non-scratch surfaces against the glossy surface of the furniture, capable of stabilizing the packaged item during shipping and strong enough to alleviate the pressure of the furniture and support the items stacked on it.

**CORNER END CAPS AND EDGE CORNERS**  
This item consists of heavy duty corrugated or honey combed paper, that is great for square and right angled designs. We use this method in furniture packaging.

**STRETCHPAK**  
Our famous Stretchpak system creates multi-use suspended packaging for protection of fragile equipment using a cardboard frame. It is ideal for electronic equipment like monitors, flat screens, printers, computers and other electronic gadgets of different shapes and sizes.

**U CHANNEL PROTECTION**  
Ideal for furniture protection where extra stability for stacking is required, and in cases where bubble wrap just won't do. This innovative product starts as a flat sheet and converts to a U shaped design for your item's ultimate protection.

**BOX FOLDER AND DESIGN**  
We manufacture different designs of boxes: die cuts, cohesive adhesive, single face, die cut corrugated cardboard and conductive (EMS) boxes.

## FOAM PACKAGING SOLUTIONS

### ECO-FACT

Did you know that Polyethylene Foam is highly recyclable and can be used again to re-create foam or even plastic bags?

We also provide foam packaging techniques that encase the item in a customized mold to hold it securely in place inside a container. We create custom-made die cuts to meet your specifications that will provide the right protection for your items.

## AUTOMOTIVE PACKAGING SOLUTIONS

Automotive Suspension Packaging, referred to ASP, combines heavy duty bubble wrap, non-scratch fabric with a corrugated cardboard design and foam that provides a suspension mechanism that enables the protection of automotive parts while in storage or during shipping. The package has been tested and approved by automotive companies and has been designated as the safest and most efficient packaging method available today.
