

First in Foams, Leaders in Innovation

The original PE foam brand
continues to evolve

Go With the Pioneer in PE Foams

Ethafoam® foam products have been the leader in polyethylene foam packaging for nearly 60 years. However, we've come a long way from our humble beginnings. We now offer a full compliment of foam options in various densities, colors, thicknesses and properties.

Legendary Dependability

The Ethafoam® line is known for its outstanding dimensional stability and recovery characteristics, while providing unparalleled cushioning protection against repeated impacts. In addition to providing excellent protection, Ethafoam® products are chemical and water resistant.

Our Standard Offerings are a Cut Above

Our line of PE foam products offer more options:

- **Densities**

We offer six distinct Ethafoam® product densities ranging from 1.5 to 9.0 lb./cu.ft.

- **Thickness**

Depending on the density, we offer our Ethafoam® planks in a variety of thicknesses, from 1.5" to 4".

- **Properties**

Some Ethafoam® products are available with anti-static and/or flame-retardant properties.

- **Colors**

We offer a variety of standard color options, with other colors available upon request (minimums apply).

Expanded Resourcefulness

Using our Ethafoam® line as a foundation, we continue to innovate new foams for specific applications.

- **Ethafoam® Whisper™ sound absorbing foam**
A polyethylene foam that is highly efficient in absorbing sound.
- **Ethafoam® Synergy® fine cell polyethylene foam**
A low-abrasion solution for applications where presentation matters.
- **Ethafoam® MRC & HRC recycled resin content polyethylene foam**
Foams with a minimum of 65-100% recycled resin content.

Universal Appeal

Given the versatile nature of Ethafoam® polyethylene foam packaging, it is used in a variety of applications, from fragile finishings to heavy duty dunnage. Common applications include electronics protection, automotive returnable dunnage, defense packaging, kitted equipment and more.

Partners in a Better Tomorrow

Reduce, Reuse, Recycle

Sealed Air makes every effort to ensure that waste packaging does not end up in a landfill. Ethafoam® products are non-crosslinked, meaning they can be recycled in our closed loop system. Our packaging design and development centers will work with you to make sure you get a package that has maximum protection with minimum material. All Ethafoam® products can be reused multiple times before experiencing any degradation in their protective qualities.

We Have Designs on Serious Source Reduction

With over 30 Packaging Design and Development Centers worldwide, Sealed Air is committed to being your partner in packaging by designing cost-efficient packaging.

Our services include design, prototyping and testing, as well as a network of trusted fabricator partners that can deliver what you need, time and time again.

Opening Doors with Closed Loop Recycling

In order to verify our recycled resin is of the highest quality, Sealed Air has implemented a Closed Loop Recycling system. We have invested in collection systems that reclaim scrap material from our network of World-Class fabricators.

This allows us to reduce the amount of our material that ends up in a landfill, while giving us greater control of the sourcing and quality of our materials.

Package Design and Development Centers Capabilities

Solution-Based Design and Development

Sealed Air's Package Design and Development Centers exist to achieve one purpose: to help our customers find a high-performance, cost-effective packaging solution. With dedicated packaging engineers on staff in our over 30 ISTA-certified labs worldwide, we are ready to listen and deliver.

Our goal is to help you find a cost-effective solution to your packaging needs, and provide you with the most efficient package possible.

Five Step Design Process

Outstanding design is a direct result of outstanding preparation. Our Five Step Design Process ensures that we are prepared to provide the best solution that includes:

- Understand the shipping environment
- Define product fragility
- Select the proper cushioning material
- Design the prototype package
- Verify the package through testing
